Web 实验五说明文档

实现功能:实现基于 OpenCV 实现图像的卡通化。

- 1. 下载安装 OpenCV, streamlit
- 2. 使用 Streamlit 构建图像卡通化 Web 应用程序
 - gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)
 - 2. scale_val = st.slider('Tune the brightness of your sketch (the higher the value, the brighter your sketch)', 0.0, 300.0, 250.0)
 - 3. kernel = st.slider('Tune the boldness of the edges of your sketch (the higher the value, the bolde
 r the edges)', 1, 99, 25, step=2)
 - 4. gray_blur = cv2.GaussianBlur(gray, (kernel, kernel), 0)
 - 5. cartoon = cv2.divide(gray, gray_blur, scale= scale_val)
- 3. 使用滤波器,获得卡通化图像效果,这里使用的是铅笔素描滤波器
 - gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)
 - 2.
 - gray_blur = cv2.GaussianBlur(gray, (25, 25), 0)
 - 4.
 - 5. cartoon = cv2.divide(gray, gray_blur, scale=250.0)

使用效果
